

Biofuel Analysis

Certified Reference Standards

AccuStandard®

ASTM, EN and IP standard test methods have been developed to monitor the properties of chemical impurities and physical properties for the application of testing biofuels and biofuel blends.

The source materials that are used to produce these fuels include plant oils, ethyl alcohol (usually from corn) and vegetable waste products.

AccuStandard offers:

- Physical properties such as viscosity and flash point
- Chemical classes such as Glycerins, FAMES and the Hydrocarbon fraction.
- All products are derived from ASTM, EN and IP Standard Methods
- New standard methods include, EN15779, EN12916 and IP391/07
